

EXPERIMENT – 5

Wireframe for a Mobile Application with Localization Features Using Figma

AIM

To design a wireframe for a mobile application using Figma that incorporates localization features such as language selection, regional settings, and localized content.

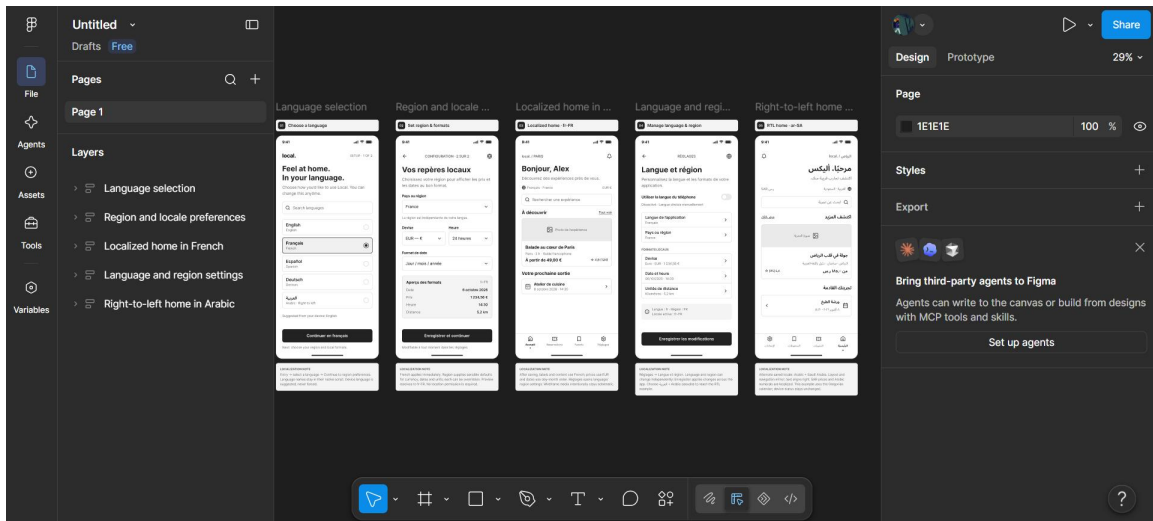

PROCEDURE

1. Open Figma and create a new design file.
2. Create a mobile-sized frame for the application.
3. Design the basic screens such as Splash Screen, Home Screen, Login Screen, and Settings Screen.
4. Add a Language Selection option in the Settings screen.
5. Create a language selection interface containing different languages.
6. Add options for country, region, date format, time format, and currency where required.
7. Show how application content changes according to the selected language or region.
8. Use simple boxes, buttons, text fields, icons, and navigation elements to create the wireframe.
9. Connect the screens using Figma prototype interactions.
10. Review the design and save the completed wireframe.

INPUT

Figma design tool, mobile application requirements, language options, regional settings, and localization requirements.

OUTPUT

RESULT

Thus, a wireframe for a mobile application incorporating localization features was successfully designed using Figma.
